

Setting Up AWS CloudFront with S3 to Deliver Static Files

Step 1: Create an S3 Bucket

1. Open the AWS Management Console.
2. Navigate to S3 → Create bucket.
3. Enter a unique bucket name and select a region.
4. Upload the files you want to serve through CloudFront.

Step 2: Create a CloudFront Distribution

1. Open the AWS Console → CloudFront.
2. Select Create Distribution.
3. Set the origin to your S3 bucket.

Step 3: Access Files via CloudFront URL

1. Once the distribution is deployed, note the CloudFront domain name.
2. Access files using the format:
`https://YOUR_CLOUDFRONT_DOMAIN/yourfile.png`
3. Files should be accessible through CloudFront.

Best Practices:

- Use HTTPS for secure delivery.
- Set appropriate cache policies to reduce latency.
- Monitor usage and performance using CloudWatch.
